THE  
BLUE HILLS  
NURSERIES

1927

W. W. HUNT & CO.

HARTFORD, CONN.

## OUR NURSERIES

Are located on Blue Hills Avenue, near Albany Avenue, Hartford, Conn. About one and one-half miles from City Hall. Electric cars (Blue Hills and Bloomfield line) pass the Nurseries every ten minutes.

Visitors at the Nurseries are always welcome.

Not open on Sundays.

**Landscape Gardening.** We are well equipped to make ornamental plantings, and will gladly prepare plans and estimates or furnish advice relative to residence plantings, the laying out of old-fashioned hardy gardens, rose-gardens, etc.

**Guarantee and Claims.** All goods are guaranteed true to name, up to grade, and in good condition when shipped. Any plant proving untrue to name will be replaced. As we have no control over its usage after it leaves our hands properly packed and in good condition, we can give no guarantee on the life of stock; however, any just complaint will receive our utmost consideration.

We do not have Agents. Buy direct from the grower and do away with the middleman's profit and agent's commission.

## Hints for Proper Planting and After Cultivation

Most of the nursery stock that fails to grow is not properly planted or cared for after planting. Care must be given the plant to insure its growth. Water should be used once or twice a week in liberal quantities and frequent loosening of the soil about the plant is essential. Plants received without soil on the roots should have their top trimmed back  $\frac{1}{4}$  to  $\frac{1}{3}$  of the new wood.

Plant only in good soil. Dig holes deep and wide enough to contain the roots without cramping. Pack the earth firmly about the roots but do not fill the hole quite full, leaving a basin to hold water. Allow no manure or fertilizer to touch the roots.

If these simple directions are followed, results will be satisfactory in practically all cases.

We make a specialty of planting ornamental stock, also lay out grounds, arrange the trees and shrubs, plant them and guarantee them to give perfect satisfaction in every way.

## ROSES AND THEIR CULTURE

**Prepare beds** by using good soil and cow or well rotted horse manure. Beds should be at least two feet in depth. For convenience of customers we offer cow manure put up in bags. See inside last page of this catalog.

### PLANTING

Budded Roses have much stronger roots, and show by an abrupt offset where the bud was interted and the stock cut off. When transplanted, this junction must be set **3 or 4 inches below the surface** of the ground. This favors the formation of new roots from the budded or top portion and greatly lessens the tendency of the roots to send up suckers, which must never be permitted to grow. The soil should be firmly compressed about the roots, and most of the top should be cut away before planting. If the soil and weather be dry, a good soaking of water may be applied, and then shade the ground and plants with mulching. If shaded by paper or other devices from drying winds until they commence growing, their success will be assured. The season for transplanting hardy Roses is April, May, October and November.

**For winter protection**, draw the soil one foot high about the plants, or even more, if convenient. Manure can be put on for additional protection. It need not be rotted; green will answer just as well, and can be covered under in the spring.

### INSECTS

A weekly application of Bordeaux-Arsenate of Lead Mixture, at the rate of eight ounces to five gallons of water, applied with sprayer, under side of foliage, during growing season will keep roses free from almost all insect pests and fungous diseases. A mulching of two inches of tobacco stems covering ground is very beneficial.

A liberal use of cold water, sprayed with force from the hose nozzle on the underside of the leaves, will keep the plants free from green fly and other insects.

## Sheep Manure

Makes Plants Grow to Perfection

# You Can Make Your Lawn and Garden Beautiful

**I**T IS an easy matter to make all plants grow to perfection. There is no mystery about it—the important point to remember is that plants need food and a rich mellow soil if they are to develop their real beauty.

No matter whether you are growing a lawn, garden, house plants, vegetables or field crops, a fertile soil is essential to success. Hard, worn-out soil means starved plants and failure. So start right and give your plants a real chance to thrive. Make your soil rich and fertile with Wizard Sheep Manure.

Everybody can get results with Wizard. It supplies the natural plant food and humus that all plants need. It puts new life into worn-out soils and makes them fertile and productive. Read the following pages and learn how to grow beautiful plants and big profitable crops with Wizard Sheep Manure.

**Wizard Helps Nature Hustle**

## Lawns and Gardens

**N**OTHING makes a home more attractive than a beautiful lawn and garden. Your success in making beautiful lawns depends upon the condition of your soil. If the soil is hard and dry the tiny grass seeds will not germinate. The tender roots cannot penetrate nor find food in worn-out soils. The first and most important step is the preparation of a mellow, finely pulverized seed bed—one rich in plant food and humus. For this purpose Wizard Sheep Manure is unexcelled. It produces a thick, velvety green lawn of lasting beauty. It provides the soil with the natural plant food that feeds the millions of grass plants that make a smooth, thick turf. Start right by using Wizard Sheep Manure and your success is certain.

Wizard is absolutely weedless, easily applied and just what nature needs to make plants grow.

In making new lawns, pulverize the surface soil well and broadcast at the rate of 6-10 lbs. per 100 sq. ft., raking well into the surface soil. Sow seed and roll.

For renovating old lawns, use 6 lbs. per 100 square feet and rake into the surface soil previous to sowing seed.

## Flower Gardens – House Plants

**I**N THE flower garden Wizard stimulates increased growth of healthy green foliage and a wealth of vivid colored flowers. It puts new life into shrubbery and trees. House plants and window boxes need frequent applications of this natural plant food. For garden planting use one pound to seven sq. feet and cultivate into the surface soil. Do not place the pure manure in direct contact with the roots—mix it well with the soil. To make liquid manure for house plants, mix one pound of Sheep Manure in five gallons of water.

## Vegetables and Fruit

**F**OR growing crisp, tender vegetables, Wizard Sheep Manure is indispensable. Its forcing action causes quick growth, insuring big crops early in the season when prices are highest. Wizard provides the humus to loosen heavy soils and improves drainage so that the soil warms earlier in Spring. It builds up the soil and makes possible the production of two or three crops from the same soil each year.

Its superiority over ordinary manure is very plain when you realize that Wizard is weedless and that One Bag Equals a Whole Wagon Load of Stable Manure. The amateur grower will find it safe and dependable, a source of increased delight in his hobby because of the wonderful results it brings.

Wizard is recommended by expert market gardeners for all vegetables, especially for radishes, lettuce, onions, celery, cabbage, early potatoes, etc. For growing luscious fruits, berries and melons it is unsurpassed.

Applications can be made broadcast after plowing and harrowed into the soil at the rate of 1000 to 1500 lbs. per acre. If used in the drill at planting time, use 700 to 1000 lbs. per acre. Side application later in the season will be found very profitable.

## For Greenhouses and Hot-Beds

**T**HE florist can rely on Wizard for quick and sure results. Unexcelled for feeding carnations, mums, asters, roses, etc. Absolutely weedless and safe for all crops grown under glass. Mix with the soil when beds are filled or use as a dry or liquid manure for feeding during the growing season. Makes a fine uniform seed bed for hot-beds. No weeds to disturb the tender seedlings. Especially recommended for tobacco beds.

## Field Crops – Tobacco, Alfalfa and Clover

**W**IZARD is practical and profitable for general farm crops. It is used extensively in tobacco growing and is especially valuable in establishing a good stand of clover and alfalfa where it is often difficult to get these crops started. Manure is essentially a soil conditioner and soil builder. The highly concentrated, easy drilling form in which Wizard is prepared makes it a valuable crop insurance. Try Wizard and watch the results it brings.

*Don't Plant Without Wizard — It Builds Up the Soil*

THE best of all manures for Home Lawns and Gardens, House Plants, Window Boxes, Golf and Country Club Greens and Fairways, Shrubberty, Trees, Vines, Fruits, Berries, Melons, all Vegetable Crops under glass or in the field. Effectively sterilized, weed seed killed. Supplies the humus, bacterial action and plant food that make everything grow.

**CAUTION:** *Insist on Wizard Brand Tag on every bag. It protects you against inferior so-called sheep manure being sold on Wizard Brand reputation.*
